Professional Summary

Statistician with two years of experience across credit risk analysis, institutional research, and applied machine learning. Experience includes credit data analysis and reporting at Metropol Corporation, institution-wide performance analysis within the Research & Planning function at the Privatization Authority, and hands-on application of Artificial Intelligence and Machine Learning through an apprenticeship at Zone01 Kisumu. Skilled in Python, SQL, Power BI, and Excel, with a proven ability to transform raw and complex data into actionable, decision-ready insights.

Technical Skills

Languages: Python, SQL, R, JavaScript, Go

Data & Machine Learning: pandas, NumPy, scikit-learn, matplotlib, seaborn, Power BI, Excel

Tools: Git/GitHub, Jupyter Notebook, Linux

Projects

Customer Segmentation Using RFM Analysis & K-Means Clustering

Solved the problem of undifferentiated, one-size-fits-all marketing to a large customer base by building an end-to-end segmentation pipeline in Python (pandas, scikit-learn) on ~540,000 UK retail transactions (UCI Online Retail dataset). Combined rule-based RFM scoring with K-Means clustering (k selected via Elbow and Silhouette methods) to group customers into 4 actionable segments (VIP, Loyal, Mid-Value, At Risk), enabling targeted retention and marketing strategies. Delivered as a modular, tested pipeline (pytest) with reusable functions for scoring new customers.

Diabetes Prediction Using Logistic Regression

Addressed early diabetes risk screening by building an interpretable logistic regression model (Python, scikit-learn) on the Pima Indians Diabetes dataset. Achieved ~70.8% accuracy and ~0.81 ROC-AUC, a substantial lift over the ~65% majority-class baseline, and identified glucose level as the strongest predictor (odds ratio ~3.26), producing clinically aligned, explainable risk signals.

Experience

AI & Machine Learning Apprentice

Zone01 Kisumu | April 2026 - Present

- Building software projects in a peer-to-peer, project-based environment using Python, JavaScript, Go, and Linux/command-line tools, with Git/GitHub for version control.
- Applying regression, classification (logistic regression, decision trees, SVM, KNN), NLP fundamentals, and unsupervised learning (PCA, K-Means, clustering) in Python and scikit-learn through hands-on, team-based projects.
- Collaborate with peers on code reviews and debugging sessions to improve code quality.

Research, Planning & Compliance Intern

Privatization Authority | March 2025 - March 2026

- Collected, cleaned, and consolidated institutional performance data across 10+ departments institution-wide for quarterly and annual performance contract reporting (GPICS system).
- Tracked implementation of strategic objectives and consolidated departmental progress reports to support monitoring & evaluation and the Annual Work Plan process.
- Maintained structured datasets and supported ISO 9001:2015 documentation control to ensure data accuracy for planning and decision support.

Credit Analyst Intern

Metropol Corporation Limited | January 2024 - February 2025

- Analyzed credit and financial data for ~20-50 customer accounts weekly to assess creditworthiness and repayment capacity.
- Built and maintained weekly Excel and Power BI dashboards tracking portfolio performance and debt recovery trends for senior analysts.
- Used SQL to extract, clean, and organize customer financial data, supporting data quality checks and accurate credit reporting.

Education

Bachelor of Science in Statistics - Jomo Kenyatta University of Agriculture and Technology (2018 - 2022)

Certifications

Data Science - Explore AI Academy (May 2023 - August 2024)
